25X1

Since ? October 1948 deliberate jaming has been evident during the entire broadcast at C(500 - 09:00 EST delly from the Chinese Communist Radio known as the North Shenei Broadcasting Station. This station transmits on the measured frequency 7495 kilocycles, and the frequency of the jaming transmitter is observed to drift slowly between 7490 and 7500 kilocycles. The jamer has a band width of fifteen kilocycles and is modulated with a rough note of approximately one hundred cycles. It appears on the air a few minutes before the North Shenei broadcast opens, and it leaves the air almost immediately after the termination of the North Shenei broadcast. While introducing a real bindrance to the roadsbility of North Shenei broadcasts, it has thus far not been strong enough in the Hammiten Islands to prevent transcription.
